

Question/Answer for CRC Project A-71 RFP

1) Is MARAMA interested in a particular city or cities?

It would be great if one of the cities were in the MARAMA region, but that is not mandatory. We would want the city to be one for which there was useful data available and which is a PM nonattainment area. I know there was a Supersite grant in NY that involved gathering some data about vehicle emissions. There was a Supersite grant in Pittsburgh that developed some excellent atmospheric chemistry information. There was a Supersite grant in Baltimore that gathered some very short term air quality speciation data.

2) How will MARAMA be involved in the project?

MARAMA's regional haze grant contains funds that were set aside by the eastern RPOs for participation in this grant. Therefore, MARAMA will help to provide some funds for the project and will have representatives on the selection committee and participate in reviewing work products.
