

CRC RFP No. A-73-1
Questions & Answers

Q1. Could you provide any intermediate or final reports from the following projects: E-80 and E-89

A1. The short answer is no. These projects are still underway and so no data can be provided at this time.

Q2. Can CRC provide any documentation on the technical specifications of the CONCEPT code developed under project A-67 to apply mobile source emission adjustments? In particular, what are the inputs that are fed to the revised CONCEPT to define fuel changes, and how are those inputs specified?

A2. In that regard, the fuel properties inputs to CONCEPT are Predictive Model fuel properties. That's RVP, T50, T90, olefins, aromatics, oxygen, sulfur, and benzene. All documentation for development of the PM is on the CARB website.
