

Q&A Document for CRC Project RW-121a Nationwide PMI Fuel Survey (Summer and Winter)- Data Analysis and Reporting

Please note that the due date of your proposal is **September 22, 2023**.

When will reports from RW-121 and RW121-2 projects be available? It would be very helpful to know the data (its level of detail and structure) that was generated by these projects.

We are not expecting to publicly release the data reports prior to this project. The contractor can expect to receive all the data files for the fuel samples. There are 168 fuels from the Summer Fuel Survey and 85 fuels from the Winter Fuel Survey. The data files will include:

- DHA results (individual excel reports for each fuel with a PMI summary report for each survey set)
- D86 results (two summary reports of the summer and winter fuels)
- SimDist results (two summary reports of the summer and winter fuels)
- VHA Data (individual reports on each fuel sample with two summary reports of each set of fuels)
